1987
Preface

In the 20 Point Programme of the Central Government, priority has been accorded to rehabilitation work of the displaced tribal people due to commencement of any type of project. The present study mainly deals with the progress made in rehabilitation work of the displaced tribal persons due to operation of Surya Irrigation Project in Jawhar talsil of Thane district, alongwith some suggestions made for speedy and model resettlement work.

The present evaluation report was undertaken and completed by Shri D.K. Raskar, Research Officer, Shri S.R. Shevkari and Shri D.S. Navchhi, Research Assistants; and Shri D.K. Nangare and Shri R.V. Raphatkar, Investigators, assisted the Research Officer in the field work. Besides, Shri J.B. Avachat, Statistical Assistant and Shri U.M. Yadav, Draughtsman assisted the Research Officer in field work as well as in tabulation of the data collected. The report was supervised by Shri V.H. Garbhag, Dy. Director and Shri M.B. Suranc, Dy. Director (I.A.D.P.) under my guidance.

I am thankful to the Executive Engineer, Surya Irrigation Project and Rehabilitation Officers of this Project who provided necessary and valuable information. I am also thankful to the Regional Manager, (Grass Procurement), Kasa, T.D.C. Nasik and the Tribal Development Officer, Dahanu, for sparing their vehicles to conduct the field work. Similarly, the Typing...
Section of this Institute has spared no pains in getting out this report.

I am sure, this report and the suggestions made therein will be useful to the authorities who are in-charge of rehabilitation work of the Project affected persons due to irrigation projects. Similarly, the report will prove beneficial in future to the displaced tribal people if the recommendations made in the report are accepted and implemented with the spirit of real public service to the displaced persons.

(G.M. SARE)

CHAPTER I
INTRODUCTION

Irrigation is an important component of the Rural infrastructure for the development of the rural areas. During the last two Five Year Plans, irrigation programmes in the State has picked up momentum to fulfill the dream of "GREEN REVOLUTION" and ultimately to achieve the goal of self sufficiency in food grains. With this object, the Government of Maharashtra have launched various irrigation projects in the State. "Surya Irrigation Project" is one of the major irrigation projects taken up by the government in Tribal Sub Plan Area of Thane District on Surya river. The river originates in Sahyadri ranges at an altitude of R.L. 457 meters near Jawhar.

Location:

The project is located in Jawhar talvil. The project site is 145 kms. away to the north of Bombay. One can reach the project site by road from Bombay by travelling on Bombay-Ahmedabad N.H. upto Charoti Naka (a distance of 125 kms.) and then along Dahanu-Jawhar S.H. (a distance of 20 kms.) The nearest railway station is Dahanu on western railways which is about 50 kms. away from the Project.

The project comprises of:

(i) a storage dam near Dhamani village on Surya river,

(ii) Three earthen dams in the saddles,

(iii) Pick-up weir near Kaudas village on Surya river-8 kms down stream of Dhamani dam.

(iv) Canal system of 134.86 kms. length (including left and right bank canals).

The project had been administratively approved by the Government for Rs. 1890.83 lakhs in 1974 and for Rs. 2573.57 lakhs in 1977. However, due to increase in cost of labour, material, equipments etc. the cost
of the project was estimated to Rs. 7703.52 lakhs during 1983. The work of pick-up weir at Kudas was started in 1975 and was completed in May 1979. The work of main dam (Masonry works) was started in September 1978 and was likely to be completed in 1987.

The project is likely to irrigate 14,696 hectares (basic) of land with the intensity of irrigating 185% cropped area (i.e. 27,188 hectares) of 105 villages from Jawhar, Dahanu and Palghar Tahsilas. Tahasilwise area to be irrigated is given in the following table.

In addition to irrigation (utilising the store-head at Dhamanti dam) it is proposed to develop hydro-Power station by installing a machinery of 5000 k.w. capacity at the foot of the dam.

In all 10 villages are submerged under Surya Project (i.e. 6 villages under Dhamanti main dam and 4 villages under Kudas pick-up weir). Out of these 10 villages, only one village is fully submerged while remaining nine villages are partly submerged.

<td>1012</td>
</tr>
</tbody>
</table>

The above table indicates that out of the ten villages under submergence, only one village (Viz. Sawa) is fully affected village while remaining nine villages are partly affected villages. In case of Sawa village, though, in all 134 houses were acquired till May, 1967, at the time of 1961 census, 133 households were not shifted to elsewhere. Therefore, at the time of 1961 census, there were 133 residential houses in the village.
The table No. 13 also indicates that in case of Tilandi and Dhawadi villages (which are partly affected villages) number of acquired houses exceed the total number of residential houses in the village. However, it is due to the fact that the no. of acquired houses include both residential as well as non-residential houses in the village.
CHAPTER II

OBJECTIVE, METHODOLOGY AND COVERAGE
OF THE EVALUATION STUDY

As a result of construction of various irrigation and other than irrigation projects undertaken by the Government, a large number of persons are affected by way of loss to their agriculture lands and houses. Government have, therefore, adopted humanitarian attitude towards the problem of their resettlement and have decided to resettle them by granting alternative agriculture lands developed plots etc. Similarly, various other facilities like housing, civic amenities, service etc. are granted to them for making the resettlement process as smooth as possible.

Rehabilitation work of project affected people, especially the tribal people, has been given the priority in the 20 point programme of Central Government sponsored by the then Prime Minister of India. In this context, the Dy. Minister (Welfare), Government of India, had called a meeting on 10-12-1986 to discuss the various problems of rehabilitation programmes of the tribal people due to setting up of a major or medium projects in the tribal areas. It was decided in the meeting that each State Government should undertake a detailed study of rehabilitation of the tribal people affected due to submergence of their lands and houses etc. in the major or medium irrigation projects in the tribal area of the State.

Accordingly, the Government of Maharashtra in Tribal Development Department vide its D.O. No. 312/1747/85/MT and 314/D-282/84, dated 8-9-89 has asked this Institute to undertake a detailed study of rehabilitation programme of the tribal people affected by Surya Project in Jawhar Tahsil of Thane District which is a major irrigation project.

While undertaking the evaluation study of rehabilitation work of the displaced tribal people due to Surya Project, completed up to 31-5-85 following main object was kept in view...
"To assess the measures of rehabilitation taken up so far, to locate the difficulties, if any, to the displaced tribal persons as well as the implementing authorities in the rehabilitation work and to suggest measures for speedy development of the displaced families\*.

The detailed objectives of the present evaluation study were kept in mind as under:

1) To see that whether (as per present Government policy) the displaced tribal persons were given the alternative lands and to help them to solve their difficulties coming in the way while implementing the policy.

2) To see that whether displaced tribal persons were given the house plots in new gaathans for building the new structures in lieu of their houses acquired for the project.

3) To see that whether the project affected persons could get the housebuilding loan or subsidy from the Govt. to erect their new houses. Similarly, to see that whether they were given the benefit of economic concessions under the programmes like R.L.E.G.F. and N.R.E.P.

4) To take stock of the civic amenities provided in the new gaathans for the displaced persons and to see that whether the displaced tribal persons in the new gaathans are happy with the civic amenities provided to them.

5) To see that whether (as per Government policy) the displaced tribal persons were given the employment on the work of the project. Similarly, to see that whether some of them could get employment in Government or Semi-Government service (i.e. the ratio of employed persons to the total displaced persons).

6) To see that whether the project affected persons whose lands and houses were acquired for the project, were given adequate compensation in time.
whether
whether
(7) To ascertain whether the displaced tribal persons were given any job training, if so, how many persons could receive the training and in what trade.

whether
(6) To see whether the displaced persons were given any assistance to bring their offered lands under cultivation.

(9) To suggest measures for model rehabilitation of the displaced tribal persons taking into account their traditions, instincts and mode of life, etc.

(10) The last but no the least objective consists of collection of family details of each affected family and extent to which it is affected, impact of shifting them from their previous villages to other new places, inventory of resources for their rehabilitation etc.

Methodology

To start with the evaluation work, it was decided to collect the basic requisite information about the rehabilitation work (viz. land and houses acquired, area submerged, total families affected and rehabilitated etc.) from the concerned officers i.e. Executive Engineer of Surya Project, Special Land Acquisition Officer, Dahanu, District Resettlement Officer, Thane and Resettlement Tahsildar, Suryanagar. As the requisite information was not received within the specific time, the same was collected by the representatives of the Institute by paying several visits to the concerned functional offices. This was mainly because that most of the records concerned were incomplete. Discussions were also held with them to take account of their views and the difficulties, if any, about the resettlement work of the displaced families.

After collection of the basic information, a thought was given to the sample size of the custoeees to be surveyed under the field work. Taking into consideration many constraints like volume and nature of work, lack of man-power, time at the disposal and
geographical mobility of the area, it was not possible to cover up all the families displaced due to construction of the project. Out of the total 1456 displaced families, rehabilitation of only 518 families was done by the Govt. at Vanai, Taluka Dahanu and Shigao, Taluka Palghar. Rest of the families resettled themselves at the places of their choice. In such cases, the detailed addresses of many persons were not available with the resettlement Tahsildar. Hence, it was not possible to cover all the affected families.

Accordingly, it was decided to canvass about 10 per cent of the total displaced families. So far as selection of villages for the field work was concerned, both the Government Resettlement Colonies (viz. Shigao and Vanai) along with villages having maximum number of displaced persons resettled at their own cost were selected for the field work. Similarly, it was decided that about 50 displaced families should be canvassed from the Government Resettlement colonies while in case of the other 10 villages it was decided that about 8 to 10 families should be canvassed from each village depending upon the total number of displaced families resettled there. Thus, in all 143 displaced families (i.e. 47 from the Government colonies and 96 from the other villages) were surveyed.

Three types of schedules (1) village schedule, (2) household schedule and (3) a schedule designed for the officers in charge of the rehabilitation work were designed for the field work. (These are enclosed at appendix-I to III). The information of the submerged villages was collected through the village schedule, while the information of the displaced tribal families was collected through the household schedules. The information collected in household schedules was taken from the heads of the families and also from the responsible persons in the families at the time of field survey. The difficulties of the displaced persons have been recorded through interviewing the
selected displaced persons from each village. The village information was collected from the village officials (i.e., Patwaries and Gram-sevak of the villages).

In addition to this, a separate third schedule was designed to take account of the difficulties as experienced by the revenue and other authorities at the time of implementation of the rehabilitation programmes of the displaced persons. Moreover, interviews and discussions were also held with the concerned officers in charge of rehabilitation work of the displaced tribal persons to assess their views about the rehabilitation programmes.
CHAPTER III
A PROFILE OF THE PROJECT AREA
CASE STUDY OF THE DISPLACED TRIBAL FAMILIES

The data collected from the secondary sources revealed that in all 10 villages affected by the project out of which one village is fully affected while remaining nine are partly affected villages. Village-wise information regarding total area of the village, area under cultivation and area submerged is given in the following table:

<table>
<thead>
<tr>
<th>Sr. No.</th>
<th>Name of the village</th>
<th>Total Area in (hect.)</th>
<th>Cultivable area of the village (in hect.)</th>
<th>Area under submergence (cultivable &amp; other) (in hect.)</th>
</tr>

</tr>
</tbody>
</table>

Total | 8019.93 | 1901.61.9 | 1862.96.2 |

It was learnt at the time of field survey that, among the total area under submergence, percentage of cultivable area constitutes as high as 90 to 95% while remaining area forms 10 to 5% which include uncultivable land, barren land and grazing grounds etc.
Population

It is seen from the collected data that almost all the submerged villages were having predominant tribal population. Amongst the affected tribal families due to the project, majority of families belong to Varli tribe followed by Mulhar Koli, Kokna and Mahadeo Koli, Scheduled Tribe communities. The details of affected families, their total and tribal population along with total no. of households (as per 1981 census) in the submerged villages are given in the following table :-

<table>
<thead>
<tr>
<th>Sr. No.</th>

*(18.0 hectares to 45 landless families)*
Out of the 1450 affected families, 143 i.e. 10% tribal families were contacted under the field study. Amongst the 143 surveyed families, 79 families were Varel, 33 families were Malhar Koli, 26 families were belonging to Kokna Scheduled Tribe and rest of the 5 families were from Mahadeo Koli, Scheduled Tribe.

Below table indicates village-wise information of the 143 surveyed families regarding their acquired lands and the Government land allotted to them.

</tbody>
</table>

**Total** 143 134 9 1032-6 149-0 acres (i.e. 60 hectares)
The above table clearly indicates that out of the total surveyed families, only the project affected families resettled at Vavai and Shigaon were allotted the alternative Government lands worth 149 acres. Moreover, it is also clear from the table that the alternative Government lands allotted to these families are too meagre compared to their acquired lands.

**Education**

It was noticed under the case studies that percentage of literacy among total population of the submerged villages is considerably low as compared to the literacy rate of the whole State. Out of 9468 souls in the submerged villages, only 1214 persons (viz. 969 males and 245 females) are literate persons. This means, average literacy rate of education among the total population of these villages is 13 percent only. Percentage of literacy in the tribal population of the submerged villages is found very low (i.e. 10-55%); while position of education among the females (tribals) of the affected villages is alarming low (i.e. 2.5%).

**(B)**

Table No. 3.3 gives details of literacy among the surveyed tribal families.

</table>

**19**
From table No. 3.3 (B) it is seen that out of 1070 persons contacted under field study, only 123 persons (i.e. 12%) were literate and 947 persons (i.e. 88%) were illiterate. Out of the total 123 literate persons, 52 persons were educated up to IVth standard, 36 persons were educated up to VIIth standard, 35 persons were studied up to Xth std. Number of persons who studied more than S.S.C. was only two. Nobody in the surveyed families from villages Tilawa, Dharampur and Ambegaon was found to be literate. This clearly indicates the level of education of the displaced tribal persons of the submerged villages.

**Land holdings**

Land holdings of the tribal people from the submerged villages were small. Inventory of the tribal land holders in the submerged villages revealed that most of them were either small or marginal farmers. Village-wise details of the number of families having land before submergence are given in table no. 3.4.

**Table No. 3.4**

</tr>
</tbody>
</table>
The above table No. 3.4 indicates that out of 143 surveyed families, 135 families were landholders while remaining 8 families were landless. Out of the 135 landholder families, as many as 50 families were small farmers as they were holding the lands below 5 acres, 16 families were having land between 1 to 2 acres. The survey of these marginal and small tribal farmers revealed that they are very poor and cannot comply with the average economic conditions.

Occupation and income

The main source of livelihood of the tribals in this area is an agriculture. More than 90% of the tribal population is dependent on agriculture and allied occupations. Percentage of population engaged in industry sector was observed to be negligible. Paddy is the main crop of the area. Insufficient lands, low quality of soil, lack of soil conservations, lack of irrigation, lack of modern techniques in agriculture and lack of education are some of the major problems in agriculture cultivation faced by the displaced tribal families due to onset of the project.

The details of the monthly income of the surveyed displaced tribal families before and after submergence are given in table no. 3.5:
### Table No. 3.5

**Total**: 143 | 1 | 0 | 4 | 15 | 10 | 25 | 12 | 3 | 116 | 62

*AS - After submergence,  BS - Before submergence*

It is seen from the above table that out of the 143 families studied under case-study, 116 families were having a monthly income Rs. 300 and above per month, 12 families were having income between Rs. 201 to 300 per month. The income of 10 families was Rs. 151 to 200 per month, 4 families were getting income Rs. 101 to 150 per month, while income of only one family was below Rs. 100 p.m.

Before submergence, though maximum number of families were getting monthly income Rs. 300 and above, it was observed that they were economically backward and could not comply with the day-to-day requirements.
The above table also reveals that the number of the families getting income Rs. 500 and above per month has been reduced after submergence. Most of the surveyed families regretted that acquisition of their agricultural lands resulted into reduction in income and increase in poverty and starvation. At the time of survey, it was learnt that some of the displaced families are working as labourers on the dam. The construction work of the dam is nearing completion and it is likely that these people will find it very difficult to get the job as labourers after the work is completed during this year and there will be very precarious condition of the displaced tribals who have lost their lands.

Compensation of lands

The details of compensation received or land received by the displaced tribals in lieu of the their submerged land are given in table no. 3.6:-

<table>

<td><strong>12</strong></td>
</tr>
</tbody>
</table>

The above table (Table No.3.6) shows that out of 143 tribal families studied under the field work, 135 families possessed land before submergence while the 8 families were observed to be landless. Out of 135 land holding families, 95 families told that they have received the cash compensation of their submerged lands. Out of the remaining 40 families, 22 families could not receive the compensation either due to non-settlement of their claims over their acquired lands (as the acquired lands originally belonged to Forest Department) or non-completion of the joint measurement by the concerned departments. 18 families have received the amount of compensation but they could not tell the exact amount of compensation received. Out of the 49 families surveyed at Vanal and Shigoon, 42 families were having lands before submergence. Out of those families, 32 families were observed to have received cash compensation plus land in lieu of submerged land.

The table also reveals that out of the total 95 families who have received compensation, as many as 70 (more than 50%) families have received the compensation above Rs. 10,000/- each. This is so, not because they were given high rate of compensation, but because of more acquisition of their lands.
Compensation of Houses

The details of families who have received compensation for their acquired houses are given in Table no. 3.7.

</tbody>
</table>

It is seen from Table no. 3.7 that out of total 143 surveyed families, 119 families have lost their houses and all of them have received cash compensation for their acquired houses. Of the total number of surveyed families, the houses of 24 tribal families were not acquired and as such the question of giving compensation does not arise in their cases. Only their lands were acquired in these cases. The Table indicates that majority of the families (67 families) have received cash compensation upto Rs. 2000 each, 19 families received
cash compensation between Rs. 2001 to 3000 each. Only 2 families were noticed to have received cash compensation above Rs. 10,000 for their acquired houses. This clearly indicates that the rate of compensation given for the acquired houses of the displaced persons was comparatively very low. Out of total 119 families, 11 families express their view that they have not received sufficient amount of money at least expected amount by way of compensation.

So far as compensation of expenditure incurred for land development is concerned, the inventory of the 135 land holders revealed that 100 families had incurred expenditure on land development, however, none of them have received the compensation of expenditure incurred by them on land development. The displaced land holders were told by the concerned authorities that the amount of compensation of the acquired land includes the expenditure incurred on land development. Similarly, the case study of 143 families revealed that none of the displaced families have received compensation for their acquired cattle sheds.
CHAPTER IV

PRESENT POLICY OF GOVERNMENT REGARDING REHABILITATION OF THE PROJECT AFFECTED PERSONS (CREATION OF MACHINERY, INFRASTRUCTURE TO BE PROVIDED AND CONCESSIONS TO BE GRANTED, ETC.)

Since the number of irrigation projects launched in the State was limited before 1965, the rehabilitation work of the project affected persons was looked after only by the project authorities of Irrigation and Power Department. But during the recent times, number of Irrigation Projects has increased to such an extent, that the rehabilitation work cannot be tackled in isolation under the one particular Department. Therefore, in order to discharge the responsibility of proper rehabilitation in an efficient and satisfactory manner, the Government have taken various decisions which are summarised as below:

Creation of the Directorate of Resettlement

For the speedy resettlement of the project affected persons, the Government has created a separate machinery called "Directorate of Resettlement" in 1965. The functions of this Directorate are as follows:

1. Allotment and development of alternative lands.
2. Providing drinking water supply in new geothans.
3. Provision of primary school in the new village site.
4. Offering employment opportunities to the project affected persons both in public and private sectors.
5. Granting loans for the housing of project affected persons in new geothans.
6. Payment of cash compensation equivalent to the difference between the value of acquired land and the value of alternative land.
7. Provision of internal and approach roads in new geothans.
8. Supply of electricity to the project affected persons in new geothan.
The Director of Resettlement acts as the Chief controlling authority in all matters connected with the resettlement of the displaced persons. He gives advice to the Government in all matters relating to resettlement, implements the resettlement programmes and ensures speedy resettlement of the project affected persons.

Divisional Commissioner

As per the Maharashtra Act No. XII of 1976, the Divisional Commissioner is entrusted the following duties in connection with the rehabilitation of the project affected persons in his Division:

1. To co-ordinate and supervise the resettlement work,

2. To ensure speedy resettlement work, and

3. To disburse the grants to the Collectors for the resettlement work according to their requirements.
Accordingly, posts of Assistant Commissioners for resettlement have been created in the State (one for each Commissioner's office) to look after the work under the guidance and control of the Divisional Commissioner.

By, Director of Resettlement

Since the number of Irrigation Projects has been increased, it has become difficult for the Director to look after the resettlement work of all the projects in the State. Therefore, the Government have appointed the Collectors and the Chief Executive Officers as Dy. Directors of Resettlement (Land) and (Development) respectively in their jurisdiction. The Collectors are entrusted the works pertaining to land matters (viz., acquisition and distribution of lands) while the Chief Executive Officers are asked to look after the work of establishing new Colonies and providing civic amenities such as water supply, school building, internal and outside approach roads etc.

Resettlement Officer

The huge work of resettlement of the displaced persons is highly impossible to be completed without
special staff. Taking into account this fact, the Government have created the posts of Resettlement Officers on the par of Tehsildars' grade and wherever necessary even, on the par of the Dy. Collectors' grade with some subordinate staff for resettlement work. This staff is attached to the office of the Dy. Director of Resettlement in the District.

Resettlement Advisory Committee

To assist the Directorate of Resettlement and to achieve speedy resettlement of the displaced persons, the Government have set up a "District level Resettlement Advisory Committee" at the District level. The Committee consist of M.L.A., M.L.C.; President of Zilla Parishad of the concerned district and two nominees of project affected persons besides the Government servants. The suggestions made by the Committee are important in assessing the genuine needs of the project affected persons.

The Committee can also give advice to the Directorate of Resettlement in the following matters.

(1) Selection of land for agricultural purpose,
(2) Selection of sites for new 'gothans',
(3) Advice on civic amenities to be provided in new gothans,
(4) Any other matters relating to Resettlement such as planning and execution of various schemes for the project affected persons. Thus, the Committee enables the Government to solve the huge problem of rehabilitation of the oustees with speed and sympathy.

Salient Features of Resettlement and Government Policy

Selection of alternative agricultural lands, selection of new 'gothan' sites and provision of civic amenities in new 'gothan' are the three main features of resettlement of the displaced persons.
I. **ALTERNATIVE AGRICULTURAL LANDS**

Alternative agricultural lands are allotted to the project affected persons from the following four sources in that priority order:—

1. Land acquired in the benefitted zone of the project,
2. Surplus lands under the land ceiling Act,
3. Government Waste Lands,

For the purpose of resettlement, acquisition of lands in the benefitted zone is done in accordance with the following slab system:—

<table>
<thead>
<tr>
<th>Size of holding</th>
<th>Area to be acquired</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Upto 10 acres</td>
<td>Nil</td>
</tr>
<tr>
<td>2. Above 10 acres to</td>
<td></td>
</tr>
<tr>
<td>15 acres.</td>
<td>2 acres</td>
</tr>
<tr>
<td>3. Above 15 acres to</td>
<td></td>
</tr>
<tr>
<td>30 acres.</td>
<td>5 acres</td>
</tr>
<tr>
<td>4. Above 30 acres</td>
<td>All the area in excess above 25 acres.</td>
</tr>
</tbody>
</table>

But, if the Government finds it difficult to secure the adequate land by the above slab system, following slab is adopted:—

<table>
<thead>
<tr>
<th>Size of holding</th>
<th>Area to be acquired</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Upto 6 acres</td>
<td>Nil</td>
</tr>
<tr>
<td>2. Above 6 acres to</td>
<td></td>
</tr>
<tr>
<td>12 acres.</td>
<td>2 acres</td>
</tr>
<tr>
<td>3. Above 12 acres to</td>
<td></td>
</tr>
<tr>
<td>15 acres.</td>
<td>3 acres</td>
</tr>
<tr>
<td>4. Above 15 acres to</td>
<td></td>
</tr>
<tr>
<td>20 acres.</td>
<td>4 acres</td>
</tr>
<tr>
<td>5. Above 20 acres to</td>
<td></td>
</tr>
<tr>
<td>24 acres.</td>
<td>5 acres</td>
</tr>
<tr>
<td>6. Above 24 acres</td>
<td>All the area in excess of 25 acres.</td>
</tr>
</tbody>
</table>

Distribution of alternative lands to the project affected persons is made by the following method:—
Area of land lost by the project affected person | Area of alternative land given to him
--- | ---
1. Below 1 acre | 2 acres
2. Above 1 acre to 2 acres. | 2 acres
3. Above 2 acres to 5 acres. | 3 acres
4. Above 5 acres | 4 acres

1. The distribution of alternative lands is subject to change. For e.g.: if family members exceed 6, additional one acre of land is given for every additional three members provided that the total area of land to be allotted should not exceed 7 acres.

2. One acre of land is allotted to landless project affected persons after all the land holder project affected persons are resettled, provided that they leave their old village along with other project affected person.

3. Outside the command area, 4 acres of dry/jalayat land is allotted to every project affected family. The maximum acreage allowable is determined in accordance with the Maharashtra Land Revenue Rules 1971.

4. To get alternative lands, the land holder project affected persons have to deposit with the Government 75% of the amount of compensation received for their acquired lands. But, the landless project affected persons are exempted from this condition as they are not in receipt of compensation.

5. Before distribution of alternative land to the project affected persons, they are shown the lands and their consent is obtained. Only then, the certificate showing the details of the alternative agricultural lands earmarked for their resettlement is issued to them.

The above orders are made effective from November, 1981.

II. ESTABLISHMENT OF NEW GAOTHAN

The issue of extension of existing gaothan or establishing new gaothan is to be decided by the -
Resettlement authorities after earmarking the alternative lands. At the time of selection of site for new gotham, precaution is to be taken that the alternative lands to be allotted should not be far away from the extended or new gotham. The oustees are given the house plots in extended or new gotham. The agriculturist oustees are allotted the house plots admeasuring 4000 to 6000 sq. ft., while non agriculturist oustees are allotted the house plots having area 2000 to 3000 sq. ft., depending upon family size. Occupancy price of the house plots is recovered from the oustees. However, the expenditure on fixation of boundary stones, removal of debris and unevenness etc. is to be incurred by the concerned occupant of the plots.

Civic amenities in new gotham

The following approved civic amenities are provided in new gotham for the project affected persons:

1. Drinking water wells

In the process of resettlement, topmost priority is given to supply of drinking water. Every new gotham established for resettlement is provided with drinking water wells on population basis. Higher the population in new gotham, more will be the number of wells. In case where water is not struck or is insufficient even after deepening the well, a piped water supply scheme is undertaken.

2. School Buildings

Irrespective of the fact whether there existed a school building in the submerged village, a school building with sufficient number of rooms on the basis of number of school going children is provided in the new gotham provided that the Zilla Parishad undertakes to run a school at that place and also agrees to maintain the building at its cost.

3. Chawadis or Samaj Mandirs

Irrespective of the fact whether a Chawati, or Samaj Mandir existed in the old gotham, Chawadis cum-Samaj Mandirs costing Rs. 8000 to 15,000 is constructed.
in the new gaotan having population below 200 and above 200 respectively. However, where there existed a Chawdi or Samaj Mandir in old gaotan and if the local body had received the compensation for it, the amount of compensation should be made available for construction of Chawdi—Samaj Mandir in new gaotan.

4. *Internal and approach Roads*

Internal and approach roads are required to be provided in new gaotan along with open gutters. In the case where the project affected persons are shifted on higher contours, a road of V.R. standard with cross drainage is required to be constructed.

5. *Other Civics amenities*

Among the other amenities to be provided to the project affected persons in new gaotan are: for play-ground, cattle sheds, S.T. Stand, Public latrines, area for cremation and burial ground and threshing floors etc. are major ones.

6. *Additional Civics Amenities*

Vice Government Resolution, Finance Department No. CCPA-1076/R.I., dated 27-7-1978, the following additional civics amenities are provided in new gaotans for the displaced persons:

(a) Public latrines in two suitable places in the new gaotans,
(b) Pastures for cattle of the project affected persons, where adequate Government land is available. However, no private land is acquired for this purpose,
(c) Supply of electricity to new gaotans for domestic and agricultural purposes,
(d) Piped water supply to the new gaotans under Rural Development scheme,
(e) Notified internal and approach roads,
(f) Provision of open area for market place and future development.
IV. VARIOUS CONCESSIONS GRANTED TO THE PROJECT AFFECTED PERSONS

Apart from providing basic civic amenities to the displaced project affected persons, various concessions are also granted to them by the Government. These concessions are as follows:

1. The project affected persons whose lands have been acquired for the project, are allowed to cultivate their acquired lands till the time of actual submergence of the lands on certain conditions.

2. They are permitted to take useful construction material from their acquired houses without any reduction in the amount of compensation of the acquired houses.

3. The displaced persons are allowed to remove the constructional material free of cost from Government quarries, waste lands and forest lands to erect their houses in new goathans.

4. The supply of house building material such as cement and cement sheets etc. is made available to the project affected persons subject to availability of the material.

5. The certificates showing that "they are project affected persons" are issued to the project affected persons to enable them to avail the benefits of the scheme purely meant for them without much disturbance.

6. The project affected persons are provided transport by the project authorities to carry their luggage from the old goathans to new one.

7. While securing Government of private services or obtaining admissions to I.T.I., the wards of the displaced persons are given special concessions, viz. relation in qualifications, age etc.

8. Agreements executed by the project affected persons in respect of plots allotted to them in new goathans are exempted from the stamp duty.

9. The project affected persons who are resettled on higher contours around the reservoir are allowed to lift water from the reservoir to irrigate their unacquired land.

......
CHAPTER V

OBSERVATIONS AND FINDINGS OF THE STUDY

On the basis of the data collected through the field survey of the project affected tribal families and the information collected from the offices responsible for the resettlement work, the following conclusions are derived:

1. It was observed that out of 1458 total project affected families, resettlement work of only 518 families was completed at the Government level by establishing the new 'gothans' at Vanai and Shigaon from Dahanu and Palghar taluks respectively. The remaining 940 families did not accept the alternative Government lands either from Vanai or from Shigaon and managed to resettle themselves at the places of their choice. The main reasons were as under:

1(i) The places of new gothans were not selected in consultation with these project affected persons. It was learnt that most of them were eager to accept the alternative Government lands only from the area known as 'Mama Bhachyacha Dangar' which is close to Surya J. Project.

1(ii) Non-availability of forest environment in the new gothans to which they were very much acclimatized.

1(iii) The new gothans sites were located far away from their submerged villages and the lands from these gothans were undeveloped and unsuitable for cultivation.

1(iv) Non-availability of grazing facility for the cattle in the new gothans.

1(v) Fear in the minds of the project affected tribal persons that they will be harassed by the advanced non-tribal people as they will be in minority at those places.

1(vi) Some of the project affected tribal families from the partly submerged villages rejected to resettle at Vanai or Shigaon because, some of their lands from the submerged villages were not acquired. In order to culti-
vote these lands they resettled themselves in the same
villages outside the submergence area.

2. During the course of discussion, the resettlement
headliner expressed the view that majority of the displaced
tribal families who resettled at their own accord opted for
their resettlement with their relatives in the villages
surrounding the project area. It was learnt that due to
huge amount of compensation with the custees, their rela-
tives greeted them in the first instance. However, after
spending the compensatory money extravagantly, the custees
who managed to stay with their relatives are now repenting
like anything as they have lost the lands on one hand and
the compensatory money on the other. Thus, it is observed
that they have been hit very hard due to the project. Some
of them have now approached the revenue authorities for
their resettlement in the areas earmarked for the purpose.

3. As per the Government policy, if more than 75 per-
cent gothen area of the proposed project affected village
is likely to submerge under the water, the whole gothen
is acquired and compensation of houses therein is given
to the concerned families. However, it was observed that
the Naijewati village (which is partly submerged under the
project) proved an exception to this rule. Even though
more than 75% gothen area of this village along with the
houses was acquired the houses of 30 to 35 project affected
tribal families from 'Nakirupada' of this village were not
acquired, nor the house compensation was paid to them on
the ground that the houses are being constructed on high
level above the submergence area. These families argued
that though their houses are located on high level, during
the rainy season when dam water reaches the maximum level,
their houses get surrounded by the water and it becomes
very difficult for them to have contact with the outside
world. In their opinion as their lands have been acquired
and they have been given the compensation, their houses
should be acquired and they should be given the compensation
for the same. Thus, it seems that these families have been
denied the justice by erroneous interpretation of the rule
in this behalf.
4. Case study of the project affected tribal families revealed that some of them have not yet received the compensation of their acquired "Eskali lands". When this was discussed with the revenue authorities, it was learnt that these lands originally belonged to Revenue Department and were transferred to Forest Department after 1955. Prior to 1955, these families made encroachment on these Govt. lands and started to cultivate them. Therefore, the Government had offered these lands to the concerned cultivators on one year agreement known as "Eskali lands". It was learnt that about 150 project affected tribal families were having such type of lands. In the opinion of revenue authorities as the Government holds the ownership over these lands, no compensation was paid to the cultivators. However, the project affected cultivators said that as they were cultivating these lands for years together, they are supposed to be the owner of these lands and therefore compensation should be given to them. They argued that if their ownership is denied, they will be proved landless project affected families and in the process of resettlement while getting the alternative Government lands, they will receive inadequate land. It was learnt that the Collector of Thane has sent this proposal to the Government.

5. The project affected tribal persons from the submerged Kondas and Talwadi villages complained that they have not received the full compensation for their acquired lands. It was learnt that they were given the compensation only at the rate of Rs. 900/- per acre. When enquired about, the resettlement Tahsildar explained that due to non-availability of the funds, these project affected persons have been given only the part payment of the compensation. The remaining amount of compensation (Rs. 41.42 lakhs) will be paid to them after availability of the funds. However, it was seen that non-receipt of full compensatory amount by the custodians has intensified their problems.
6. It was noticed that some of the project affected tribal persons have not been given the compensation of their acquired lands due to non-completion of the joint measurement of their acquired lands. It was learnt that the acquiring body consisting of surveyors from the S.L.A.O's. office and from Irrigation Department separately take measurements of the acquired lands. Payment of compensation is made only when the surveyors from both the offices form a uniform opinion about the measurement. The S.L.A.O. Dahanu expressed that due to shortage of surveyors the joint measurements of the lands of some of the project affected tribal persons are remained to be completed and as such they have not been given the compensation. A sum of Rs. 1.04 lakhs is remained to be distributed due to above difficulty.

7. It was noticed that the rate of compensation given for the acquired lands under Surya Project was comparatively low compared to other projects such as Thai-Waishet in Raigad District. The maximum rate of compensation given for the acquired land under Surya Project was Rs. 12,000/- per acre while under Thai-Waishet Project (it was learnt) it was above Rs. 15,000/- per acre. Not only this, but the rate of compensation varied from village to village. The project affected tribal persons from Sawa and Tildena villages argued that they have not received the adequate compensation for their acquired lands. They complained while the people from other villages got the compensation at the rate of Rs. 12,000/- per acre, they have received the compensation of their acquired lands at the rate of Rs. 5000/- per acre only. These people expressed their discontent over the disparity in the rates of compensation from one village to another. The reason put forth by the concerned office was that the market value of lands located at road-side was higher compared to the value of the lands located in the interior area.

It was observed that out of the 518 project affected families resettled in the new gothans, only 381 families (viz. 336 landholders and 45 landless families) were allotted the alternative Government
lands worth 340.41 hectares. Remaining 137 families, (viz. 2 landholders and 135 landless families) were not allotted the alternative Government lands worth 57.20 hectares. When enquired, the resettlement Tehsildar stated that for want of removal of encroachment from the Government land to be allotted to the project affected families, these families are not allotted the alternative lands. For example: the Government land in survey no. 181 Shigoon was reserved for allotment to the project affected persons. However, due to lack of proper survey and demarcation of the lands, the same was occupied by the local landless families to whom the Tehsildar Ealghar had allotted the lands from the survey no. 170 only and not from survey no. 181. Due to this fact, neither the resettlement Tehsildar allot the lands to the project affected families nor the project affected families – cultivate the lands in possession of the local landless families. The resettlement Tehsildar added that unless the encroachment is removed by the Revenue Tehsildar, he cannot do anything. Thus, their present position is very precarious and an immediate attention is needed to solve this problem.

9. It was learnt that the alternative lands allotted to the project affected persons resettled in the new gau than were not fully developed. The stems, roots of the trees, and bushes etc. in the land were not removed off. It was seen that by the end of April 1987, out of total 340.41 hectare land allotted to the 381 families, 226.68 hectare land remained to be developed. It was learnt by the revenue authorities that for want of machinery and funds these lands remained to be fully developed. The question of supplying the machinery and funds was also raised by the representatives of the project affected tribal people in the meeting of unstatutory committee headed by the additional Collector of Thane who tried to get the machinery from the concerned Departments (viz. Agriculture and Irrigation). But at the same was not received in time, development of the lands was remained to be completed.
10. The displaced tribal families resettled at Vanai new gaathar were observed to be unsatisfied with the quality of the lands allotted to them. Majority of them expressed their views with regret that the lands allotted to them are unsuitable for cultivation. In their opinion these poor and typical type of the lands require constant rainfall to raise the crops. Otherwise, if the rain stops for 3/4 days the lands get cracks and ultimately it affects the crops.

11. As maximum number of the project affected tribal families resettled at their own accord, their views about resettlement are of paramount importance. It was learnt that the affected families were migrated to different villages numbering more than eighty. The resettlement Talsildar and the S.L.A.O. were suppose to maintain the upto-date villagewise lists of these ousttees. However, it was observed that no such systematic and upto-date record of these families was maintained either in the office of the resettlement Talsildar or in the office of the S.L.A.O. The reason put forth by them was that the Gram-sevaks of the concerned villages did not forward the upto-date lists of these project affected families. In the absence of such type of record, it proved very difficult to contact these families.

12. All the contacted project affected tribal people having trees on their acquired lands said that they have not received any compensation for the trees. It was learnt by the Revenue Authorities that compensation of the trees which was worked out on the basis of the rates fixed by the Forest Department was included in the amount of compensation of the acquired lands paid to them. However, it was noticed that the authorities did not clarify the exact amount of the compensation of the trees to the concerned persons. Thus, the payment of compensation of the lands inclusive of compensation of the trees made the concerned tribal families created doubt about the compensation of the trees. Similarly,
it was noticed that none of the displaced family was given separate compensation for their constructed cattle-sheds in the submerged villages. Moreover, one of the project affected tribal persons from Bhamodi village complained that he has not received the compensation of the well-dug on his acquired land.

13. The contacted project affected tribal families argued that the compensation received by them for their acquired houses was in adequate. Majority of them expressed that they were given the house compensation up to Rs. 2000/- per house only. Under any housing scheme the cost of house or hut is not less than Rs. 5000/- where as the tribal families were compensated by Rs. 2000/- per family. No justification was found from the authority for this rate.

14. So far as allotment of houseplots located in the new gaathan is concerned, it was noticed that selection of the site for creating houses of the displaced families was not made properly. The house site and plots were not fit for the construction of houses. During the rainy season, the houses constructed in Vedarai new gaathan get moistured due to the peculiar type of soil which does not allow water to percolate causing damages to the structures. The people expressed their fear that these houses may be in dilapidated conditions within a span of 5 to 6 year.

15. It was learnt that some of the project affected persons who received houseplots in the new gaathan have constructed the houses there, but do not stay in these houses. They stay elsewhere at some other villages. However, they have kept their relatives in these houses. Thus, it seems that they have unnecessarily occupied the houseplots in the new gaathans.

Establishment of new gaathans

16. It was learnt that selection of sites for the new gaathans was not made in accordance with the choice of the project affected tribal families. Not only this, but the sites of new gaathans were observed to be for
away (about 75 to 90 kms. away) from Surya project and have no grazing facility for the cattle. Due to this reason, majority of the custeas rejected to resettle at the new gaathans.

**CIVIC AMENITIES**

**Drinking Water Supply**

17. Water is the primary basic need of the human being and the cattle. However, it was observed that the new gaathans established for resettlement were not provided with adequate good quality of water. It was noticed that in Yanai new gaathan, there are 4 drinking water wells with sufficient water, but it was learnt that the quality of water from these wells does not remain good throughout the year. There is a fear of water borne diseases. In case of the Shigvan new gaathan, it was observed that there is shortage of water. Out of the 3 bore wells in the gaathan, drinking water is used only from one bore well as one of the bore wells is out of use, while water from another bore well is not worth drinking.

**Samoj Mandir**

18. Both the new gaathans were provided with the Samoj Mandirs, but it was observed that these Samoj Mandirs are quite inadequate to cater the need of public meeting or social functions. It was also observed that the Samoj Mandir in Shigvan new gaathan is constructed at one end of the village and not in the centre of the village. As there is no electricity in the gaathan, during night time it becomes difficult for the villagers to assemble in the Samoj Mandir. Thus, the very purpose of the Samoj Mandir is defeated as it has no functional utility.

**School Building**

19. Though school buildings are constructed in the new gaathans, it was observed that the school buildings are inadequate to run the classes. Only 1st std. to IV std. classes are run in these school buildings and for further education, the wards of the displaced persons
in the new gothans have to go to Hingeon which is about 6 to 8 kms. away from the resettlement colonies. The school building at Shigon was observed to be in dilapidated condition. Moreover, it was observed that there is no provision for the residential accommodation of the teachers in both the new gothans. In the absence of quarters the teachers do not stay there nor attend the schools regularly which ultimately affects the education of the students.

Internal and Approach Roads

20. The condition of internal roads in the new gothans was observed to be very unsatisfactory. They are not regularly required for want of existence of the Gram Panchayats in the Gothans. So far as approach roads are concerned, it was observed that the Vanai new gothans is having Kutcha approach road from Vanai to Khambale. The S.T. Service is available to the gothans only during fair weather. In case of the Shigon new gothans, present approach road is from Shigon to Vanai which is longest one and also being intersected by the Nala. As the bridge on the Nala is not high enough, during rainy season it goes under flood water and proves useless for communication. It was learnt that on this bridge 2/3 persons were carried away by the flood water and lost their lives. There exists another kutcha road from Shigon up to Hingeon (Forest gate) which is shorter one but is crossed by the Nala having no bridge over it. During rainy season, people find it difficult to cross the Nala.

The other facilities like dispensary, post-office, pick-up shed, market place, pastures for the cattle, village tank, latrines, gutters etc. were not present in the new gothans. Thus, it was observed that the tribal people in new gothans are not happy with the amenities provided. In other words, there does not appear a co-ordination among different Departments while providing the required amenities in the new gothans.
Various Government concessions

21. The case study made of the project affected tribal families under Surya project revealed that none of them were given any job training to start their own jobs. Similarly, it was learnt that (with some exceptions) the large number of wards of the displaced persons were not admitted in the I.I.I. for this or that reason.

22. Instead of giving employment to the project affected tribal persons in Government or Semi Government service, it was learnt that at the time of construction of the dam, about 2500 to 3000 tribal persons from the project affected villages were working as labourers. Moreover, it was observed that at present only 132 persons from the project affected families are given the permanent employment in the office of the Surya Irrigation Project. Out of these 132 employees, it was observed that 18 persons are working in Class-III cadre while remaining 114 persons are Class-IV Government servants. Some educated youths of Sawa village argued that they were not given the employment in Government offices as they had not registered their names with the employment exchange.

23. So far as the issue of the certificates (Project Affected) to the displaced tribal families is concerned, it was learnt that no such certificates were issued to the displaced families who resettled at their own accord except to those who had asked for the same. The reason quoted by the concerned authority was that their addresses were not known. It was also noticed that even in the new gathans all the displaced tribal persons were not issued the project affected certificates. It was learnt that for want of the certificates, the displaced tribal families are unable to get the concessions for project affected persons.

24. It was learnt that transport facility was freely made available to the displaced persons under Surya project to carry their luggages to the new establish gathans or to the places of their choice. The project affected tribal persons from Sawa village told that they
have decided to resettle at Somerkhed village and therefore they have purchased one acre land in that village to erect their houses. However, they complained that they did not get the "transport passes" from the office of Forest Department at Jawhar to carry the house materials of their acquired houses to the new village. They argued that though they visited the office many a times alongwith necessary documents, the authorities of the Forest Department are not issuing the transport passes to them. This has caused hurdles to them in carrying the house materials to the new village of their choice.

25. It was revealed under the case study that none of the displaced tribal persons who received the alternative Government lands were given any assistance to bring those lands under cultivation. Similarly, it was learnt that almost all of them could not receive the benefit of economic concessions under any programme.

Some other observations

26. The Government have set up a District level the Resettlement Advisory Committee consisting of M.L.A.s., M.L.C.s., President of Zilla Parishad and two nominees of project affected persons along with Government servants connected with the resettlement work to speed up the resettlement work of the displaced persons. However, it was observed that in Thane district the Project Officer, I.I.D.P. Jawhar and the Tribal Development Officer, Dahanu are not the members of this committee. Nor have they been invited for the meeting or associated with the resettlement work of Surya project. It is also noticed that there is a lot of communication gap between the displaced tribal families on the one hand and the officers of Revenue Department and Zilla Parishad on the other.

27. It was observed that the Head Quarters of the Resettlement Officer of Thane, S.L.A.O. Dahanu and the Resettlement Tahsildar Suryanagar are located far away from the Resettlement colonies of the displaced persons. Similarly, it was observed that none of them is provided
with the Government vehicle. Thus, location of the Head
quarters far away from the new goethens and non-availability
of the Government vehicles to these officers (responsible
for the resettlement work) cause many hurdles in the rese-
ttlement work and slow down the progress of the work. It
was learnt by them that they have to undertake the tours,
for the resettlement work (in three Tahsils) by S.T. only.
In addition to this, shortage of clerical staff, shortage
of the surveyors and lack of co-ordination among various
Departments etc. are some of the difficulties expressed
by them which come in the way of speedy resettlement work
of the displaced persons.
CHAPTER VI

SUGGESTIONS

1. Having looked into the progress of resettlement work of the displaced tribal persons under Surya Irrigation Project, it will be worthwhile to devise some suggestions on rehabilitation programme for the project affected persons. On the basis of the data collected, processed and the opinions expressed by the custees, following suggestions are made in connection with the rehabilitation programmes of the displaced tribal persons.

2. As the emergence of any irrigation or hydro project causes displacement of the people from the submerged area, it is suggested that prior to the establishment of any such type of projects in the tribal area, the views of the local tribal people (to be affected) regarding the project and about their rehabilitation should take place. The Government should form a machinery to collect detailed information of the families along with their views about their resettlement on ideal basis. In other words, people's participation is a must in any such type of project if it is to be successful one. If the people to be affected are convinced about their resettlement in a better fashion, there will not be any oppose to the project on the part of the custees. It is essential to create confidence regarding their rehabilitation programme amongst the project affected persons and they should be rehabilitated in the areas of their choice.

3. Since the work of rehabilitation of the displaced tribal persons is of paramount importance and involves the time lag, it is suggested that the action of their resettlement should be got completed before storing of water in the dam and displacing them from their habitats.

    Unless the infrastructure is fully provided in the new proposed site for rehabilitation of the displaced persons, the would be affected persons should not be displaced. In short, "first rehabilitation and then
displacement" should be the policy of the Government towards the tribes. In this connection the posts created under the machinery responsible for the rehabilitation work should be manned by the efficient and skillful personnel having integrity and sympathy towards the tribal people. Moreover, the frequent transfers of such personnel should be avoided and they should be retained on a particular project till it gets completed or at least for 3/4 years with some exceptions.

4. In the process of rehabilitation of the displaced tribes, co-ordination amongst the different Departments is highly essential. It is, therefore, suggested that while designing the project, the officials of project designing wing (viz. officials of Irrigation Department) should be co-ordinated with the officials of the rehabilitation work (i.e. the officials of Revenue Department of the Government and the Zilla Parishad). Moreover, it is suggested that there should be a detailed chapter on rehabilitation in the project report containing information of the area under submergence, number of villages, families and persons to be affected, area of alternative lands and house plots to be allotted, amenities to be provided in the new resettlement along with the procedure and stages of rehabilitation work.

5. To speed up the rehabilitation work of the displaced persons in Tans District, the Government have set up a District level Resettlement Advisory Committee. However, the Project Officer, I.T.D.P. Jemhor and the Tribal Development Officer, Dehannu are not the members of this Committee and they are not involved in the work of rehabilitation of the displaced tribes. At present there is a communication gap between the displaced tribal persons and the officers of rehabilitation Departments. It is, therefore, suggested that the Project Officer, I.T.D.P. Jemhor and the T.D.O. Dehannu should be taken on the Committee, so that they can bridge up this gap and establish a good rapport with the tribal people by extending assistance to the Committee. This Committee should
bring out to the notice of the Government the discrepancies, if any, in the rehabilitation work of the displaced tribal persons.

6. It was observed that most of the tribal persons affected under Surya Project did not accept the alternative Government lands from Vendi and Shiggon on the ground that they are located far away, uncultivable, without grazing facility and where they will be harassed by the local non-tribal people. It is, therefore, suggested that allotment of alternative Government lands along with grazing facility should be made from the areas of their choice. The persons above 18 years should be considered as a separate family for allotment of land, house plot at the time of rehabilitation of the affected family in the project operation. So that they will feel safe, live together with their relatives and cultivate the lands. Moreover, the new goathens to be established should be nearer to these lands, say within the radius of 7 to 8 kms.

7. It was observed that due to ignorance, illiteracy and lack of foresight, majority of the project affected tribal families preferred cash compensation and opted for their resettlement with their relatives. However, the compensatory amount was spent extravagantly on drinking and other non-productive purposes by them. Thus, they have lost the lands on one hand and the money on the other. It is, therefore, suggested that as far as possible the affected tribal persons should not be paid cash compensation. “Land in lieu of land” should be given to them from the areas of their choice where their kiths and kins are residing. This will facilitate to maintain their cultural heritage and they will also not be degraded to the level of “landless” labourers.

8(a) The poor and illiterate tribal people cannot count the notes received by way of the compensation and it is likely that they may be deceived by the middlemen. In order to check this, it is proposed that the payment of the compensatory amount to the project affected tribal
persons may be made, as far as possible, in the presence of the Project Officer, I.I.D.P. Tribal Development Officer, Social Welfare Officer, or Manager, Adivasi Co-operative Societies etc., who will safeguard the interest of these project affected tribal persons.

8. (b) Since the tribes are illiterate, the benefits available for the displaced tribes, should be brought to the notice of the austeres, well in advance.

9. It was learnt that the displaced tribal persons under Surya Project were given the compensation of their acquired land and houses as per the standard rates fixed by the Government which are generally less than the open market prices. Under these circumstances, the poor project affected tribals were badly affected. Therefore, it is suggested that the tribals should be given the compensation of their properties as per the market prices. Similarly, the rate of compensation to be given under every project should be the same. Moreover, there should be no disparity in the rate of compensation from one village to another under the same project which causes distress on the part of the austeres.

10. As per the Government policy, if more than 75 percent area of a particular proposed project affected village is likely to be submerged, the whole area of the village should be acquired and compensation of lands and houses therein should be made to the concerned persons. As the Talcheti village under Surya project proved an exception to this rule, it is suggested that the whole area of the village should be acquired and compensation of the lands and houses should be made to the concerned displaced persons. This will solve the difficulties of the persons from unacquired portion of the village during rainy season and they will get the justice.

11. The tribal landholders of "Exsali land" argued that they have not received the compensation for these lands. Though these lands originally belonged to the Government, the landholders were cultivating the lands for years together and as such they claim themselves to
be eligible for getting the compensation. It is, therefore, suggested that, from humanitarian point of view, the Govt. should take the decision at the earliest and issue the orders to disburse the compensation of these lands to the concerned tribal persons.

12. It was observed under the case study that the project affected tribal persons from Kumbas and Talawade villages received only the part payment of the compensation for their acquired lands for want of adequate funds. It is, therefore, suggested that the Government should make adequate funds available for disbursing the remaining amount of the compensation to these persons.

13. The case study of the project affected tribal families revealed that some of the tribal persons were not paid the compensation of their acquired lands due to non-completion of joint measurement of their acquired lands for want of adequate number of surveyors. It is, therefore, suggested that adequate number of surveyors may be appointed in the concerned offices to complete joint measurements in time to enable the displaced tribals to receive the compensation early.

14. It has been observed that some of the displaced tribal persons had incurred expenditure for the development of their acquired lands but they could not get the compensation for the same. Taking into consideration the poor economic conditions of the tribal people, it is proposed that while assessing the value of the land, the expenditure incurred on the development of the land should be considered and the value of the land and amount of development cost together should be paid to them as per the current prices.

15. It was learnt that due to lack of proper survey and construction of the lands (in a particular survey number from Shigmo) to be allotted to the project affected tribal persons, the same was occupied by the local landless families to whom the Tehsildar Paphner has allotted the lands from another survey number. This caused hurkles in the allotment of alternative
Government lands to the displaced tribes. In view of this, it is suggested that before distributing the Govt. lands to any category of persons (may be landless or the project affected) proper survey and demarcation of these lands should be got completed by the concerned Department so as to indicate the clear boundaries of the survey no. numbers. It is further suggested that in the above case, the Revenue Tehsildar, Fajgir should first remove the encroachment made by the local landless families on the Government lands and then should transfer the lands to the resettlement officer for onward distribution to the project affected tribal persons.

16. One of the reasons why most of the project affected tribal persons did not accept the alternative Government lands was that the lands to be allotted to them were not fully developed and as such the lands were not useful for cultivation. It is, therefore, suggested that before distributing the Government lands to the project affected persons, the land should be fully developed to such an extent that the project affected tribal persons will not hesitate to accept it. Similarly, as far as possible, better quality lands should be allotted to them. Moreover, it was learnt that those who received the alternative Government lands could not get the assistance to develop the same. In view of this, it is stated that either the Government should develop the lands before distribution or give assistance to the concerned land holders to develop the lands.

17. As Surya Irrigation Project is located in tribal area, majority of the tribal cultivators in this area are socially and economically very backward and as such they are unaware about irrigation facilities. Taking into consideration this position, it is suggested that those tribal cultivators should be exempted from the "water charges", otherwise majority of them may, perhaps, not get benefit of the irrigation facility and thus, the water stored in the Dam may prove useless. The Govt. should think sympathetically the issue of "free irrigation water supply" to the lands of the tribal cultivators under Surya Irrigation Project.
17.A) It is suggested that the Resettlement Officer and the S.L.A.O. concerned should maintain the up-to-date lists and addresses of the project affected persons along with familewise information about acquisition and allotment of lands and houses/house plots, compensation given, loans sanctioned etc. This will prove easy to take account of resettlement work along with the difficulties of the astees.

18. As it was learnt that the project affected landholders having trees on their acquired lands were not paid the separate compensation for the trees, it is suggested that the compensation of the trees acquired may be given separately so as to remove the doubts in the minds of the concerned tribal persons. Similarly, the compensation of constructed cottlesheds should be paid to the astees separately exclusive of the compensation of the acquired houses.

19. For the purpose of resettlement, selection of site of new gaathans is highly important. Selection of site of the new gaathans should be mainly based on fitness of land to erect the houses, availability of enough good quality water for drinking and other purposes throughout the year and closeness of the gaathan to the alternative allotted lands. It is, therefore, suggested that before selecting the site for the new gaathans it should be ascertained whether the site suits for construction or not. In case of Vanci new gaathans it was noticed that the houses get moistured during the rainy season. It is, therefore, suggested that either the Government should undertake the repairs of foundations work along with the pillars to these houses or the plot holders/house holders should get 30 to 50 bags cement free of cost each to repair the foundations of their erected houses. Similarly, as expressed by the astees, taking into consideration their economic conditions, the housebuilding loans given to them may be treated as subsidy.
20. So far as availability of drinking water is concerned, it is suggested that unless the Ground Water Survey Department (G.S.D.A.) certify of strucking enough good quality water through out the year, selection of site of the new gathans may not be fixed. As it was noticed that both the new gathans were not having adequate good quality drinking water throughout the year, it is suggested that both the gathans should have additional drinking water wells in the nearby area having good water potential or they may be provided the piped water under I.R.D.P.

21. It is suggested that in order to provide civic amenities quickly to the displaced persons in the new gathans, the responsibility of constructing/providing these amenities (such as construction of drinking water wells, school buildings, Samaj Mandirs, internal and approach roads, bus sheds, dispensaries, electricity etc.) should be entrusted to the project authorities itself instead of Zilla Parishad. The cost involved in constructions of these amenities should be met from the funds of the concerned project. Similarly, there should be a separate "account head" with resettlement wing of the project to meet the urgent requirement of expenditure on civic amenities. Thus, the job of well resettlement of the austeres is tremendous one and the action to make it more successful will naturally require more tremendous efforts on the part of the implementing authorities of the Government.

22. It was observed that the school buildings constructed in the new gathans were in adequate to run the classes. Therefore, taking into account the strength of school going students and eligible school going children, enough school buildings should be erected in the new gathans. Similarly, as it was noticed that the teachers in these schools do not attend the schools regularly for want of quarters in the new gathans which ultimately affects the quality of education. It is, suggested that along with the construction of adequate
school buildings in the new gothans, construction of teachers’ quarters may be undertaken simultaneously. Moreover, while constructing the dispensaries in the new gothans, residential quarters for doctors and nurses may be undertaken so as to facilitate the medical aid in time to the needy displaced tribal persons.

23. The Chawdis or Samaj Mandirs in both the new gothans were observed to be inadequate to serve the purposes such as — a place for running Balwadi, organizing panchayat meetings, or a halting place for Government officials. It is, therefore, suggested that both the new gothans should be provided with the extra land for the extension of Samaj Mandirs. Moreover, in case of Samaj Mandir in Shigauli, it is suggested that it would be constructed in the Central place of the gothan instead of at one end of the village which will practically be useful to the dwellers in the gothan.

24. In both the new gothans the condition of internal and approach roads was observed to be unsatisfactory. Therefore, it is suggested that good quality internal and approach roads may be provided to these gothans. Moreover, while chalkling out the approach roads, it may be thought over that, as far as possible, the road to be constructed should prove a short cut and not the longest one. This will facilitate frequent contact of the displaced persons with the outside world. Similarly, it may not be out of place to propose here that in the process of rehabilitation of the displaced persons, they should be brought to the road side instead of developing the roads in the remote areas. The bridges on the nullas crossing the approach roads should also be made high enough to keep the communication going on even during the rainy season.

25. The creation of other facilities like dispensary, post office, pick-up-shed, market place, cattle sheds, village tank, play ground, cremation and burial ground, public latrines etc. should be earmarked in the new gothans. This work may be given priority. It is hoped that with the completion of these facilities, the displaced
tribal persons in the new gaathana will be happy about their resettlement. Moreover, it is suggested that providing the above quoted amenities to the displaced persons must be legally binding on the Government. Therefore, all the facilities/protections likely to be provided to the displaced tribal persons must be converted into legal provision under the law, only then its implementation will have some force and the displaced persons will feel sure about it. The time schedule for completion of these facilities should be fixed and must be followed under the legal provision.

26. A) To minimise the hardships of the project affected persons, the Government have granted various concessions (as discussed in Chapter No. IV). These concessions should be made available to them. The case-study of the project affected tribal persons revealed that none of them was given any job training with the result that nobody was observed to have his own job. As the construction work involved in every project requires some skilled labourers, such as masons, plumbers, carpenters, electricians etc., it is suggested that the suitable persons from the project affected tribal families may be selected by the project authorities and they may be imparted job training in such trades, so that they will have additional income source even after the completion of the project. Similarly, it is possible that the project affected persons can raise income if they are encouraged to undertake the supply of family needs such as vegetables, dairy products, poultry etc.

27. In case of service/posts in Irrigation Department establishment, the project affected persons are given the highest priority and they are not required to register their names with the employment exchanges. However, it was observed that out of the total project affected persons
under Surya project, very few (i.e. only 132) were observed to be working in Irrigation Department establishment. In this connection, it is suggested that factories existing in near about area of the project should be compelled to take some candidates from the displaced tribals on priority basis as apprentice trainees under the "Apprenticeship Act" so that they may attain the technical skills and ultimately be absorbed in permanent employment. Moreover, it is suggested that if some agro-based and forest based industries or some processing factories are opened in the vicinity of the new gaonans, the employment potential for the displaced tribals will be created.

26. So far as admission in the I.T.I. is concerned, it is suggested that the children of the project affected tribal persons should get first priority even by relaxing the existing conditions. They should be provided with the hostel facilities, stipend and books etc. The Department of Technical Education of the Government has recently opened some I.T.I.s. and Technical schools in the Tribal Sub Plan area of the State. Accordingly, the children of the displaced tribal can be trained in the trades like Turner, Fitter, Moulder, Electricity etc. which are having good demand.

29. It was learnt that most of the project affected tribal families, who resettled at their own accord, were not issued the certificates as "the project affected" for want of which they are unable to receive various concessions granted by the Government. In this connection, it will be worthwhile to state that no family should be displaced unless the certificate is issued to it, so that the question of identification of addresses and other similar things will not come in the way.

30. The Project affected persons under Surya Project were provided with transport facilities by the project authorities. However, it was learnt that the project affected tribal families from Sama village could not
get transport passes from the office of Forest Department to carry their kits to the new village of their choice. It is, therefore, suggested that the officer concerned should immediately issue the transport passes to the affected persons if they prove to be the project affected one. It is also stated that delay in issuing the transport passes to the genuine custees without any reason should be seriously viewed.

31. It is suggested that the benefit of the I.R.D. Programmes implemented through the E.D.Os. in Tribal Sub Plan area should first reach to the project affected tribal persons and only then to others. Amongst the target to be achieved under these Programmes, percentage of project affected tribal beneficiaries should be as high as possible.

32. As the Head Quarters of the implementing officers responsible for the resettlement work are far away from the new established gothans and as they are without the Government vehicles. It is suggested that they should be provided with the Government vehicles to supervise and speed up the rehabilitation work. Similarly, it is stated that at least the office of the Resettlement Tahsildar, Suryanagar, should be shifted to S kvpur which is nearer to the new gothans, so that he can attend to the complaints of the resettled tribal families in the new gothans. In addition to this, the various vacant posts in the concerned offices should be got filled in immediately so as to speed up the rehabilitation work.

32. A) It has been experienced that the rehabilitation ideally planned certainly leads to the mutually acceptable centre of growth in the locality and becomes emulating to the other sections of the society. On the contrary, if it is not planned in well thought manner, it reacts adversely to the social evils disrupting the developmental efforts directed towards the welfare of the custees. It is, therefore, imperative that the rehabilitation programme must be conceived ideally and put through the welfare of the masses in general.
33. Briefly, it can be summarised that for solving the problem of resettlement of the displaced tribals, the Government should not rest content with mere distribution of compensatory money to the affected persons as they lack judicious spending. A systematic programme of allotment of alternative Government lands as per the choice of the custees along with construction of residential houses and provision of social amenities in the new settlements should be undertaken by the Government as a trustee of public interest. What is needed here is the social approach towards the social problems and that too with deep moral significance. The crux of the resettlement problem of the displaced tribals is to ensure that in the process of their rehabilitation, they should not go down as compared to their previous position. It is, therefore, highly essential that the different Departments concerned in rehabilitation work should have co-ordination and they should take utmost care while rehabilitating the displaced tribals.

34. Thus, it is hoped that if all the aforesaid considerations are strictly taken into account and care for the distress exhibited by the displaced tribal persons will naturally come down and will result into the happiness amongst the custees.
